

Croatian National Network

DIGITALIZATION AS A PART OF THE NATIONAL
OCCUPATIONAL HEALTH AND SAFETY POLICY

One of the important objectives of national networking group is to strengthen the national policy of incorporating health and safety protection into education and educational processes according to the strategic goals of ENETOSH.

DIGITAL CROATIA STRATEGY 2032

- ▶ " The purpose of integrating digital technologies into education processes is to support and facilitate the work of educators and improve the learning experience of children and students. These technologies should not replace the physical presence and interaction among children/students and between children/students and educators."
- ▶ "...it is necessary to consider the well-being of educators and children, as well as potential negative effects of inadequate application and use of digital technologies in teaching..."

Digitalization as a part of the national occupational health and safety policy brings many benefits such as

Enhanced prevention

- ▶ by using digital health records in monitoring workers' health
- ▶ by reusing health data in medical research for preventive purposes

Improved training and education

- ▶ by using online platforms for training workers on safety protocols, rules, and best practices
- ▶ by digital simulations and virtual reality as useful tools for training in real scenarios without physical risk

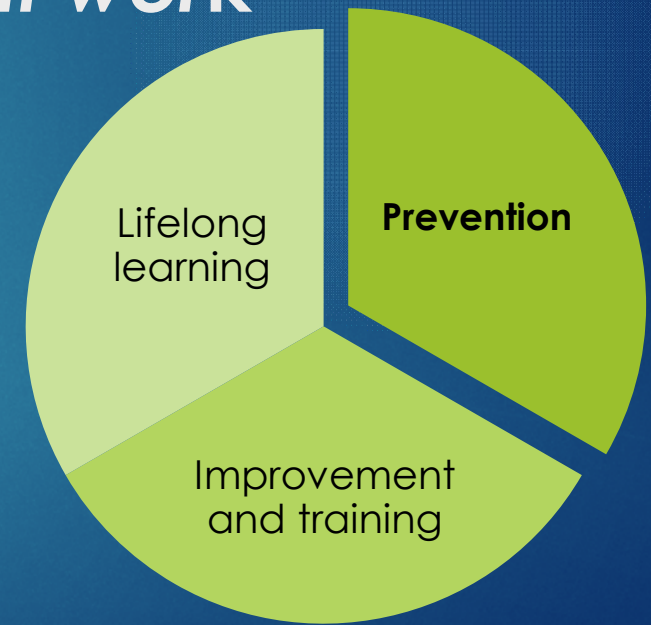

Better risk management

- ▶ by developing software solutions for workplace risk assessment that use analytics and data models to identify potential hazards, and suggest measures to mitigate them

Conference: *With knowledge to safety and health at work*

sigurnost.eu

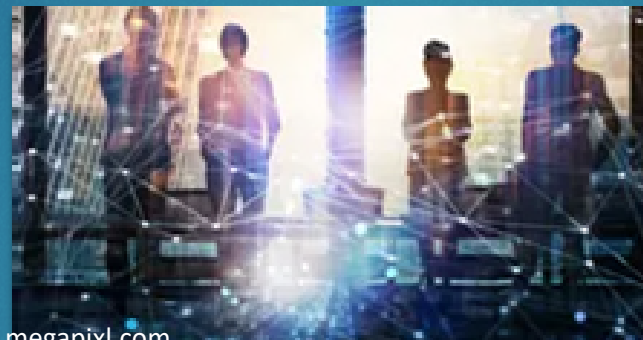

Conference topics

Virtual reality offers a risk-free training environment

Strengthening preventive healthcare of workers through the secondary use of health data

Shaping the future of work

Adjustment of work to technical progress

"Fit for work" program - education for promoting health at work

A comprehensive approach to health and well-being in the workplace

Key messages:

- ▶ In a constantly changing world of work, investing in knowledge is an important way to respond to the challenges of these changes.
- ▶ Knowledge is the basis for innovation and development of new effective models in risk prevention.
- ▶ Education and knowledge are the key to a safer and happier workplace.

Thank you!
