

THE INTEGRATION OF OCCUPATIONAL SAFETY AND HEALTH INTO VOCATIONAL AND TECHNICAL TRAINING : EXPERIENCE REPORT FROM SENEGAL

Promotion of the Culture of Prevention in Schools, Training Centers and Universities

IAPRP recommendations, for the management of OSH in the FPT, as a workforce preservation strategy.

Achieve the establishment of a harmonized regional framework for the effective integration of OSH into the PTT, which will serve as a reference for national projects.

Strategic anchoring

Orientations of the Emerging Senegal Plan (PSE) 2035 through its Axis 2 called "Human Capital, Social Protection and Sustainable Development" Objective N°3 of Senegal's National Occupational Safety and Health Program backed by the National Occupational Safety and Health Policy, adopted in March 2017. **METHODOLOGICAL APPROACH**

1st phase : STRUCTURING

2nd phase : FORMULATION

3rd phase : VALIDATION

4th phase : IMPLEMENTATION

NATIONAL STRATEGY

The national strategy for implementing the project in Senegal was based, for the most part, on:

- The gradual establishment of an OSH management system in FPT establishments;
- The development of the skills of trade trainers and company tutors in the transmission of preventive knowledge and skills in the workplace;
- The review and improvement of training content capable of providing young people arriving on the job market with the necessary benchmarks for their effective participation in the action of preventing occupational risks;
- The development of innovative approaches, favoring learning in contexts meeting the requirements of safety and health at work.

STRATEGIC GOALS

GENERAL OBJECTIVE

To contribute to reducing the accident rate in professional professions.

SPECIFIC OBJECTIVES

- **Promote OSH** in the PTT;
- Establish concerted governance and management;
- Applying OSH texts in the PTT;
 - Integrate OSH into the curriculum.

On governance, a mode of governance based on a dynamic partnership, inclusive management, rational and efficient management of activities as well as sustained communication.

On the integration of OHS in curricula, the suggested integration model advocated taking charge of OHS through modules or specific programs in vocational training and apprenticeship, targeting qualification levels from CAP to BTS.

On the upgrading of OHS standards of infrastructure and equipment in training locations, it aims to take into account OHS in the environment of establishments, a component of training curricula.

The intervention framework has three axes: concerted governance, integration of OSH into curricula and upgrading of equipment and infrastructure.

The aim is to highlight the choices of:

- Sectors of activity;
- Professions within these sectors;
- Geographical regions of intervention in the professions specific to the chosen sectors of activity.

TARGETED PROFESSIONS

In the pilot phase, the choice of professions was made according to the following criteria :

- the loss rate: particularly in the 5 majors like the building and public works (BTP), agri-food industry, fishing, mining and quarrying, and trade professions.
- 2. contribution to economic growth areas agri-food, mechanics and metallurgy, wood, paper, cardboard and printing industries, chemicals and plastics, energy, the textile, clothing, leather and skin sectors and other industries.
- 3. Existing training offer and training requests

TARGETED PROFESSIONS

- **horticulture**, which is growing with agribusiness;
- **agri-food processing and catering** that exposes to dangers such as poisoning, various diseases, etc. ;
- **the construction trades** with heavy use of lifting or handling, masonry, carpentry, machine operation,.....;
- **mining professions,** in particular gold panning and quarrying.

MANAGEMENT AND ORGANIZATION

Institutional Arrangements

Project implementation ensured by the State of Senegal, through two main committees:

A Steering Committee : chaired by the Minister in charge of vocational training in collaboration with the relevant sectoral Ministers and responsible for:

- defining the orientations for the integration of OHS in the FPT
- validating the annual action plan;
- approving the budget;
- facilitating the mobilization of resources;
- monitoring the execution of the budget;
- validating the activity reports;
- Monitoring and evaluation of the project.

MANAGEMENT AND ORGANIZATION

Institutional Arrangements

Multidisciplinary Prevention Support Team (EMAP)

Representatives of the relevant ministerial departments,

Coordination: Social Security Fund, focal point of the IAPRP in Senegal and interface between the national and sub-regional levels and in collaboration with the ILO.

Committee responsible for :

- Ensuring project management:
- Implementing the guidelines defined by the COPIL:
- Preparing the budget;
- Implementing and monitoring activities;
- Writing the half-yearly and annual activity reports

Example of training framework

LEVELS	REQUIRED SKILLS
N-V : Operator (work activity)	-Identify dangers during activities; -Implement protective measures; -Alert in the event of dangerous situations; -Adopt appropriate behavior in the event of an accident, incident, or malfunction.
N- IV : Technician (work situations)	-Identify and assess risks; -Propose and prioritize preventive measures; -Adopt appropriate behavior in the event of an accident, incident, or malfunction.
N-III : Senior technician (business sector)	-Identify and assess risks (correction or design); -Choose prevention and protection measures for operators; -Validate and implement prevention measures.
N-I et II : Supervision (company and its environment)	-Identify OHS issues in the company; -Integrate OHS into the management of its activities and the conduct of its projects; -Contribute to the management of OHS in the company.

Example of training evaluation

Competition for the best Posters on initiatives and good practices in Safety and Health at Work - STUDENTS

- 35 training schools
- 48 works presented
- 10 award-winning works
- BP AISS certificate
